Sprint 3 / Final Sprint
Product Owner: Jason Hugh Sam

Completed Sprint 2 features:
- Amplify
- Filters (high/low pass)
- Record
- Undo (music edits)
- Save
- Create playlist
- Hashtags
- Login/Logout
- Register/email confirmation
- Edit profile
- Follow/unfollow
- Submit/delete posts with music
- Comments
- Wavesurfer works!

Incomplete Sprint 2 features:
- Suggested songs
- Rating
- Better UI/Studio

Incomplete Sprint 1 features:
- Change pitch/speed/reverb

Problems:
For the most part, this sprint went pretty smoothly. We're still looking for libraries that implement changing pitch/speed/reverb, but if we can't find any soon, we'll have to either do it ourselves or scrap them. Other than that, we mostly need to update/polish our UI so everything works smoothly.

Communication for this sprint was much better in general, but a few miscommunications led to some (minor) problems. Two people ended up writing code to display a user's posts because it wasn't done. Also, the rating feature was only partially complete. The suggested songs feature was built on an *assumed* implementation of the ratings, but we realized too late and didn't finish them for this sprint.

Final Sprint Backlog:
- Competitions
    - Create competition
    - Scoring for competition
    - Competition template/pages
    - Sign up for competition
    - Create submission (music)
    - List competitions
    - List submissions
    - Make sure everything looks good
- Rating
- Change pitch/speed/reverb
- Suggested songs
- Deployment (Heroku)
